

# Landscape and Visual

We are currently undertaking a full Landscape and Visual Impact Assessment which will accompany the planning application.

A selection of images from the below viewpoints will be taken and photomontages produced to provide a visual representation of how the project will look once construction has been completed and then 10-15 years into its operation.

To date we have requested a pre-application response from the Council and have asked the Council and statutory consultees on their agreement with the proposed viewpoints.

Once completed, these viewpoints will be assessed within the LVIA. We welcome any comments on these and opinions on additional viewpoint locations.
